

Installation Guides

Mycountdown templates are written in React.js and there are 15 templates available for you to use in your React application.

Download the mycountdown.zip from Themeforest and unzip to your new local folder. All the source files are stored in mycountdown folder.

```
/public
/src
  /assets
    /template1
    /template2
    /template3
    /template4
    /template5
    /template6
    /template7
    /template8
    /template9
    /template10
    /template11
    /template12
    /template13
    /template14
    /template15
    /timeuptemplate
  /components
    /Appbanner
    /ShowCounterTemplate1
    /ShowCounterTemplate2
    /ShowCounterTemplate3
    /ShowCounterTemplate4
    /ShowCounterTemplate5
    /ShowCounterTemplate6
    /ShowCounterTemplate7
    /ShowCounterTemplate8
    /ShowCounterTemplate9
    /ShowCounterTemplate10
    /ShowCounterTemplate11
    /ShowCounterTemplate12
    /ShowCounterTemplate13
    /ShowCounterTemplate14
    /ShowCounterTemplate15
  /theme
  /App.js
  /index.js
/package.json
/README.md
/yarn.lock
```

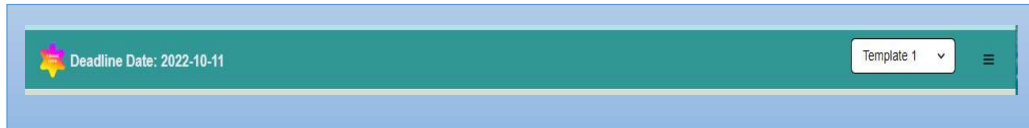

Go into your command prompt and change your directory to mycountdown folder. Type:

```
yarn install or npm install
```

This will automatically build all the modules for you. To run, type:

```
npm run start
```

In your google chrome or other browser, type “localhost:3000” in your browser url if it is not run automatically.

Click on the pull-down to select all the 15 templates available. Click on icon  to reset and setup your new deadline date.
